Subject: Contract signed for Onshore Power Supply system at the terminals of the Port of Rijeka

KONČAR and the Port of Rijeka have signed a contract worth EUR 11.49 million (excluding VAT) following an international public tender in which KONČAR was selected to design and build an Onshore Power Supply (OPS) system. The system will supply ships with electricity from shore at two container terminals: Adriatic Gate Container Terminal (AGCT) at Brajdica and Rijeka Gateway Container Terminal (RGWCT) on Zagreb Quay. The project will be delivered on a turnkey basis and is co-financed by the European Union through the Connecting Europe Facility (CEF). The deadline for construction and commissioning of the OPS system is 24 months from contract signature, with an additional 6 months allocated for testing.

Each terminal will have two 4 MVA connection points, which can be combined into a single 7.5 MVA connection to meet the needs of the largest container ships. The project also includes the construction of dedicated transformer substations at both terminals to meet the specific technical requirements of shipboard electrical power systems. These substations will convert the frequency from 50 Hz to 60 Hz and transform the voltage from 20 kV to 6.6 kV. A distinct part of the project is the Cable Management System (CMS), which enables ships to be connected to the shore infrastructure safely and efficiently.

The shore power technologies to be deployed in Rijeka build on KONČAR's systematic development of solutions for transport decarbonisation, ranging from battery and hybrid trains and low-floor trams to state-of-the-art solutions for electricity generation, transmission and distribution, as well as the monitoring, control and cybersecurity of critical infrastructure.
