## The most significant financial risks in 2019

Significant risks which marked 2018., have been reduced with accomplished agreements on natural gas purchasing conditions and repayment of debt for natural gas. According to the current market situation, it is estimated that 2019 will be under pronounced influence of the variable level of mineral fertilizer prices, natural gas prices, costs of CO<sub>2</sub> charges and the fluctuation of the USD and EUR exchange rate. The financial result in 2019 will also depend on the dynamics and the scope of the rationalization of the business processes of the Company and the Petrokemija Group, and, besides this, the following risks continue to exert caution:

- ❑ Natural gas as the most important raw material is still supplied on the domestic market, according to contracts concluded with two suppliers - INA d.d. from Zagreb and Prvo plinarsko društvo d.o.o. from Vukovar. The price of natural gas is related to the EUR exchange rate and the price of natural gas on the European spot market. Reducing the price of natural gas transport from 01.01.2019. will have a positive effect on the financial result in 2019.
- ❑ Lowering the VAT in 2017 had a favorable impact on the sale of mineral fertilizers on the domestic market, but a significant effect is still the level of state incentives in agriculture and the purchase prices of the main crops.
- ❑ Fluctuations in the prices of raw materials on the world market that have so far been present will continue to have an impact on the level of material costs in the next period
- ❑ The deadlines for realizing part of the so-called "ecological investments", according to the Decision of the integrated environmental protection, have expired. The extension of deadlines by 2026 has been asked from the authorities of the Government of the Republic of Croatia.
- ❑ Following the recapitalization of the Company, according to the decisions of the General Assembly of 31 October 2018, as a precondition of future business model, the implementation of the total internal measures rationalization of business operations in the Company is imposed, the change of the model of sale of finished products (increase in regional volumes, and reduction of spot market share) and finding favorable conditions for financing the modernization of production and logistics facilities in the following years.
