Subject: Dalekovod has successfully completed the certification process

Dear all,

we are free to inform you that Dalekovod d.d. has successfully completed the process of assessment in the area of quality, health, safety protection and environmental protection conducted by Achilles (the international organization for making assessments for suppliers).

The respective assessment has been conducted by Achilles at the expense of National Grid (transmission system operator in Great Britain), as an integral part of the pre-qualification for the transmission line construction works in Great Britain and services regarding delivery of equipment and project designing.

For that reason, the assessor Achilles stayed in Dalekovod d.d. during the period from 18th to 21st July 2011 that assessed the management system of Dalekovod d.d. as approximately 95% successful system, the factory in Velika Gorica and one of the actual construction site as approximately 96% successful (while all the other suppliers are also below the indicated percentage of successfulness).

Since this is a renowned international organization that conducts assessments on request of their clients and considering very high ratings that Dalekovod d.d. has obtained, Dalekovod d.d. has once again shown that it complies with all international standards relating to quality, environment, health and occupational safety.

Respectfully yours,

Dalekovod d.d.
