

ERICSSON NIKOLA TESLA ENABLES INFORMATIZATION OF CROATIAN HOSPITALS

Ericsson Nikola Tesla will deliver the Hospital Information System to the Clinical Hospital Center Split, Hospital for Infectious Diseases “Dr. Fran Mihaljević” and Specialized Hospital for Medical Rehabilitation “Biokovka“. The contracts are worth more than HRK 10 million.

Ericsson Nikola Tesla will enable the informatization of the Clinical Hospital Center Split in cooperation with the company Infosistem, as well as the informatization of the Specialized Hospital for Medical Rehabilitation “Biokovka“, in cooperation with the company Enel. The Hospital Information System will improve the work of medical personnel, and it will also enable an easier health monitoring of all patients.

The Hospital Information System represents a comprehensive ICT solution, designed for the integration of the administrative, financial and clinical information across healthcare provider ecosystem. Through integration of all processes within an institution and centralization of all patient related data in one place, the system provides an easier and an even more efficient data exchange between all healthcare personnel, from nurses to doctors and management. Modular and flexible system architecture enables its application regardless of the medical institution’s size and specialization, from clinics to clinical hospital centers.
