INFORMATION ON THE STATUS OF PRODUCTION IN PETROKEMIJA, Plc. KUTINA FACILITIES AFTER OVERHAUL

The overhaul of Petrokemija, Plc. Kutina facilities in January was successfully executed and all facilities, except facilities for the production of urea, have been successfully started-up, despite the unfavorable weather conditions and very low temperatures.

Ammonia production plant is currently in a short standstill caused by low temperatures. Its production is expected tonight, followed by the production of urea.

Yesterday's problem with the lack of natural gas was resolved by a rapid and effective coordination among Prirodni plin – HEP - INA (Refinery) and Petrokemija and additional, emergency imports of natural gas.

All these activities are a guarantee that Petrokemija will provide sufficient quantities of all kinds of mineral fertilizers for the spring sowing season.
