The planned overhaul

At the beginning of January 2015, Petrokemija, Plc. will gradually stop the production facilities and start the regular planned annual overhaul.

Repair works will be carried out on part of the production plant with maximum involvement of Petrokemija's work force and with minimal investments. Parts of the production plant will go into overhaul successively from the beginning of January and in early February the plant is expected to be in full operation after overhaul.

In the current period, a sufficient amount of transitional supplies of mineral fertilizers is ensured as well as production in plants that are not in overhaul in order to meet the anticipated demand in the domestic and foreign markets.
