New product in accordance with the Revised Program of Restructuring and Financial Consolidation 2015 - 2019

Petrokemija, Plc. has recently successfully produced a trial volume of a new product – granular ammonium sulfate, which is one of the cornerstones of the revised Program of Restructuring and Financial Consolidation 2015-2019 presented by the new Board of the Company.

Granular ammonium sulfate is suitable for all crops, especially for those with higher requirements for sulfur, such as oilseed rape, potatoes, tobacco, and grapevine.

It is applied in granules directly to the soil or dissolved in water through irrigation systems, in basic fertilization in late autumn, pre-sowing and top dressing.

Petrokemija's granular ammonium sulfate will be available from April 2015 and there is already a great interest for this new product of our company on the market.

Successful trial production of granular ammonium sulfate after own technology is the first step in carrying out one of the tasks planned by the revised restructuring program in the part of changes of product range and starting up the production facilities that have so far been stalled.
