### New PetroBlue product

This week, Petrokemija d.d. has introduced a new AdBlue product to its production range, under the brand name PetroBlue. PetroBlue is a diesel engine additive, a 32.5 percent Urea solution in demineralized water, used to reduce NOx compounds in exhaust gas of diesel vehicles equipped with SCR catalysts.

Petrokemija d.d. is planning to become the leader in the production of AdBlue products, in accordance with the ISO 22241 standard. The annual production capacity is 50,000 tons and it will be sold in bulk and large packaging of 200 to 1000 liters. If there is interest, smaller packages of up to 20 liters may be available. With this new product, Petrokemija has become Croatia's only domestic licensed AdBlue solution manufacturer and thus the country will no longer have to rely exclusively on the import.
