New product in accordance with the Revised Program of Restructuring and Financial Consolidation 2015 - 2019

Petrokemija, Plc. has recently produced the first volumes of the new product, granular ammonium sulphonitrate (ASN). The introduction of new products is one of the cornerstones of the Revised Program of Restructuring and Financial Consolidation of 2015-2019.

Granular ammonium sulphonitrate contains nitrogen in both forms, ammoniacal and nitrate and is suitable for top dressing and pre-sowing fertilization of all agricultural crops. In addition to nitrogen, it contains sulfur, which is also very important in the nutrition of crops. It can be applied on all types of soils and is suitable for application to soils where it is impossible to apply fertilizer by machinery.

It is applied in granular form; it is easily accessible and rapidly dissolved to deliver top utilization of nutrients in colder conditions.

Granular ammonium sulphonitrate is already on sale and there is great interest in this new product of our company in the market.
